GROUP ASSIGNMENT 2

Problem 1

A company consists of many employees working in different departments. Each employee has information to store such as employee number, full name, date of birth, gender, start date of work as well as in which department. Each employee will be kept a record of the salary receipt process during his or her employment, information including the start date of receiving that salary, salary coefficient, bonus coefficient and notes. Department info includes code, name and which employee is the manager. Each employee is in contact with the client and is responsible for some of projects that the client deals with. When assigning projects and customers to staff in charge, the system also needs to save information about the start date of assignment. Customer information includes customer code, full name, contact phone number, address, email. Project information includes project code, project name, start date and end date, project content, and the project lead manager. An employee can be a manager for multiple projects at the same time.

Problem 2

A website that manages a dental clinic needs to manage the members accessing the site. Information of members includes username, password, full name, email, phone number, year of birth. There are 3 types of member: patients, dentists and admins. For patients, we need to save more info such as ID card, address, occupation and place of birth. With dentists, we need to save more info: expertise, position, degree, and main working place. With admin, we need to save more info: admin level. A patient can make an appointment in advance through the website or by a registered dentist. Appointment slip includes info: code, created date, appointment date and time, appointment number, appointment content, status, dentist code, patient code, scheduled and the status showing this slip issued by the dentist appointment or patient appointment.

Requirements:

Draw a Class Diagram to describe the above requirement. The odd group does problem 1, the even group does problem 2.
